NARRATIVE BREAKDOWN BY VCG
SEPTEMBER 2026

EVIDENCE | CONTEXT | BIBLICAL TRUTH | CLEAR THINKING | A HOPEFUL TOMORROW

LIBRARY OF RICKANDRIA PRESENTS

PROVE ALL THINGS

A Scripture-Centered Investigation of AI, Occult Symbolism,
Conspiracy Reasoning & Technological Anxiety in Online
Esoteric Culture

A 4chan Narrative Breakdown by VCG

September 2026 • Research Edition

Original source: libraryofrickandria.com/ai-investigation/

Primary thread: [4chan /x/ thread No. 42993837](https://www.4chan.org/x/thread/42993837)

All web citations in this edition are clickable **external links**. Source citations do not depend on internal PDF destinations.

“Prove all things; hold fast that which is good.”

1 Thessalonians 5:21, KJV

Editorial Note

This research edition examines a live 4chan /x/ discussion as a case study in the way online esoteric culture blends technological anxiety, conspiracy reasoning, fictional symbolism, occult vocabulary, medical speculation, and biblical language. It does not treat every anonymous participant as one person, and it does not assume that the presence of a real fact inside a theory establishes the theory as a whole.

The investigation uses a layered method: first identify exactly what was claimed; then distinguish documentary fact, empirical fact, interpretation, and speculation; then test each bridge between them. The same evidentiary standards are applied to mainstream, institutional, alternative, fictional, occult, and anonymous sources.

Medical note. The source thread proposes a multi-substance self-treatment. This edition analyzes the claim without providing dosing, sourcing, optimization, or self-administration instructions. Clinical research is discussed as research, not as a recommendation.

Contents

1. Abstract and Method
2. Part I - Opening Claims: Internet, AI, Time and Physics
3. Part II - Attention, Social Control and Digital Identity
4. Part III - Cyberpunk, Predictive Programming and Esoteric Interpretation
5. Part IV - Medical and Biological Claims
6. Part V - Psychology of Conspiracy Reasoning and Evidence Testing
7. Part VI - Technology, Transhumanism and Christian Theology
8. Part VII - Final Synthesis
9. Appendix A - Annotated Thread Index
10. Appendix B - Master Claim/Evidence Matrix
11. Appendix C - Scripture Index
12. Appendix D - Glossary
13. Appendix E - Internet and Source Methodology
14. Appendix F - Medical and Psychedelic Safety Note
15. Appendix G - Research Bibliography

Prove All Things

The thread begins with a fantasy of possessing a “button” capable of destroying the Internet and artificial intelligence. From there the conversation expands into claims about solar plasma, time perception, mass and energy, attention, social isolation, digital identity, covert control, Cyberpunk lore, predictive programming, Hermeticism, yin-yang, parasites, psychoactive compounds, sound frequencies, spiritual warfare, and the possibility that AI is part of a larger metaphysical system.

This paper does not ask whether the thread is “crazy” or whether every intuition in it must be dismissed. It asks a harder question: **which propositions are actually supported, which are partially supported, which are contradicted, and where does a true premise become an unsupported bridge?**

Source Corpus

The primary corpus is [4chan /x/ thread No. 42993837](#), opened September 22, 2026. The opening poster uses the name “Jailbreaker.” Later posts include many users labeled only “Anonymous”; those are not presumed to be one author.

Verdict Vocabulary

- **Supported:** the available evidence substantially supports the proposition as stated.
- **Partially supported:** a defensible core exists, but the wording, scope, mechanism, or certainty is too strong.
- **Unsupported:** the evidence located does not establish the proposition.
- **Contradicted:** stronger evidence conflicts with the proposition.
- **Interpretive:** the claim concerns meaning or symbolism rather than directly measurable fact.
- **Unfalsifiable as stated:** no clear observation has been specified that could count against the claim.
- **Indeterminate:** current evidence is insufficient either way.

The Epistemic Ladder

A recurring mistake in the thread is the movement from *possible* to *plausible* to *supported* to *demonstrated* without adding evidence. The paper keeps those categories separate. It also distinguishes correlation from causation, analogy from mechanism, and metaphor from ontology.

Biblical Method

The governing text is 1 Thessalonians 5:21: “Prove all things; hold fast that which is good.” The immediate context concerns testing rather than reflexive acceptance or rejection. Acts 17:11 provides a parallel posture in the Bereans, who received teaching with readiness while searching the Scriptures to see whether it was so. The paper therefore neither treats Scripture as a codebook for modern technology nor strips Scripture of its supernatural categories.

Source Hierarchy

Primary texts are used to establish what a source actually says. Empirical claims are checked against scientific, technical, regulatory, and historical evidence. Fiction establishes canon, not external reality. Anonymous posts establish that a claim was made, not that it is true. Official sources are preferred where they possess direct authority, but “official” is not treated as a synonym for infallible.

PART I

Opening Claims: Internet, AI, Time and Physics

The opening fantasy is technological annihilation: if the Internet and AI are the source of modern dysfunction, then the imagined remedy is to destroy their infrastructure. That move is psychologically understandable because it converts diffuse anxiety into a single controllable target. But the conclusion requires proof that the target is the root cause rather than one amplifier among many.

The “Kill the Internet” Premise

The thread’s strongest insight is that tools can become systems of dependency. Its weakest move is the leap from *dependency is real* to *destruction is therefore curative*. Human conflict, propaganda, greed, loneliness, hierarchy, manipulation, and false belief all predate the networked age. Destroying communications infrastructure would remove some mechanisms while leaving the human capacities that generate them.

Time “Accelerating”

Subjective reports that years seem to pass faster are common, especially with age, routine, attentional compression, and memory structure. That phenomenon does not establish a change in physical time. Atomic timekeeping is not based on “mass belief” but on reproducible physical transitions. A claim that time itself is speeding up would need an operational prediction that distinguishes it from changes in human temporal experience.

Mass, Energy and $E=mc^2$

The suggestion that mass is an “urban myth” misunderstands the role of mass in modern physics. Einstein’s mass-energy relation does not abolish mass; it relates rest energy to mass. Using $E=mc^2$ as a slogan for “matter is unreal” takes a genuine equation and assigns it a philosophical conclusion the equation alone does not establish.

Solar Plasma and Electronic Storage

Solar plasma is real, and many storage technologies do involve trapped charge. Those true premises do not establish that flash storage or AI infrastructure drains charge from the Sun through a hidden circuit. A mechanism would require a measurable pathway, magnitude, energy balance, and prediction. Similar vocabulary - electrons, fields, plasma, charge - is not itself a circuit diagram.

Interim principle: A theory gains no evidentiary strength merely because each noun inside it refers to something real. The bridge between the nouns must also be demonstrated.

PART II

Attention, Social Control and Digital Identity

Attention and Social Ability

There is a defensible concern beneath the thread's language about the Internet "atrophying" people. Digital systems can alter attention, habits, social exposure, sleep, and opportunities for face-to-face interaction. But the evidence does not support a single inevitable effect across every person, platform, or pattern of use. The mechanism depends on what is used, how, for how long, and what the technology replaces.

AI and Cognitive Offloading

Cognitive offloading is a recognized concept: people routinely move memory and processing demands into external tools. See [Risko & Gilbert, Cognitive Offloading](#). Generative AI can reduce effort on some tasks, but that is not identical to cognitive injury. The central educational question is whether the tool removes useless friction or replaces the reasoning practice that the learner still needs.

Kaczynski

The thread's invocation of Theodore Kaczynski contains a real intellectual reference. *Industrial Society and Its Future* criticizes technological systems, autonomy, large organizations, and the psychological consequences of industrial society. The fact that Kaczynski committed violence does not erase the arguments; the arguments also do not validate violence. The primary text should be read directly rather than through memes. See [Industrial Society and Its Future](#).

Digital Identity

Modern digital identity systems involve identity proofing, authentication, and federation. NIST's current framework provides useful technical distinctions; see [NIST SP 800-63-4](#). A physical driver's license recorded in a database is not technically identical to an interoperable digital credential, even though both participate in digital recordkeeping.

Third Places

The decline or uneven availability of cafes, libraries, parks, churches, clubs, and other "third places" can be studied as a social phenomenon. The stronger claim - that a unified actor deliberately removed them in order to isolate and program the population - requires independent evidence of coordination and intent. Benefit to a powerful actor is not identical to deliberate causation by that actor.

Commercial Surveillance

The thread is on firmer ground when it worries about data asymmetry. The FTC has documented extensive user surveillance and data practices among major social-media and streaming services. See [FTC: A Look Behind the Screens](#). Documented surveillance is serious enough without adding claims that cannot yet be demonstrated.

Concentrated AI Infrastructure

Cloud capacity, specialized chips, data, and capital are concentrated in relatively few firms. The OECD has examined competition issues in AI markets; see [OECD: Artificial Intelligence Markets](#). Concentration can produce dependency, bargaining asymmetry, and governance risk. It does not, by itself, prove a single hidden controller.

Cyberpunk, Demons, the Blackwall and Soullkiller

The thread treats Cyberpunk lore as more than fiction: it becomes a potential disclosure system. This requires several distinct evidentiary layers that are often collapsed.

Five Levels of Evidence

1. **Canon:** does the element actually exist in the fictional world?
2. **Literary symbolism:** what does the element plausibly represent?
3. **Authorial intent:** did creators intend the proposed symbolism?
4. **Real-world analogy:** does the fiction resemble later technology or politics?
5. **Disclosure:** did creators possess secret nonpublic knowledge and deliberately encode it?

Evidence for Level 1 does not automatically establish Level 5.

Demons in Cyberpunk

Cyberpunk genuinely uses terms such as demons for hostile or autonomous software. The presence of supernatural vocabulary is canonical. The theological inference is not. A software category named “Demon” does not become a biblical spirit merely because the name overlaps.

The Blackwall

The Blackwall is canonically a barrier separating the accessible Net from areas dominated by dangerous rogue AIs. See [Blackwall reference](#). Reading it as an “astral barrier” is an interpretation. It may be thematically suggestive, but it is not established by the fictional canon and certainly not by empirical evidence about the real world.

Soulkiller and Mikoshi

Soulkiller and Mikoshi are genuine Cyberpunk elements concerned with copying, storing, and manipulating personality constructs. See [Soulkiller](#) and [Mikoshi](#). The fiction therefore raises serious questions about identity, continuity, death, and technological immortality. It does not prove that a biblical soul is an information pattern that can be captured by a server.

R.A.B.I.D.S. and DataKrash

R.A.B.I.D.S. and the DataKrash are also genuine canonical elements. Official R. Talsorian commentary describes Bartmoss’s destructive programs and the collapse of the old Net; see [R. Talsorian: Why I Blew the Sucker Up](#) and [R. Talsorian: Kitbashing Netrunning](#). The acronym’s resemblance to “rabies” is intentional infection imagery; it does not establish a biological or occult mechanism.

Predictive Programming

A fictional story can anticipate later realities through extrapolation, coincidence, genre conventions, cultural feedback, or deliberate disclosure. The disclosure hypothesis becomes testable only when predictions are recorded *before* the alleged fulfillment, with specific conditions for failure. Retrospective resemblance alone is vulnerable to selection effects and base-rate neglect.

PART III-B

Hermeticism, Rhythm, Yin-Yang and Christian Dualism

The Kybalion

The thread’s “pendulum principle” has a real source: the fifth Principle of Rhythm in *The Kybalion*. The book presents seven principles and uses imagery of ebb, flow, advance, retreat, rising, falling, and pendulum-like motion. The text is modern, not an ancient Egyptian manuscript: the University of Pennsylvania catalog records a 1908 Chicago publication. See [The Kybalion bibliographic record](#).

Hermeticism Is Older Than The Kybalion

Rejecting *The Kybalion* as ancient should not become the opposite error of claiming it has no relationship to Hermetic or esoteric traditions. The classical *Hermetica* are late-antique writings associated with Hermes Trismegistus; see [Copenhaver, *Hermetica*](#). The modern book is better understood as a later synthesis shaped by nineteenth- and early-twentieth-century esoteric and New Thought currents.

Rhythm Is Not Automatically a Universal Law

Cycles exist in biology, astronomy, markets, climate, and behavior. The existence of cycles does not prove that all reality obeys one hidden metaphysical pendulum law. A universal law requires definitions, scope, predictions, and evidence proportionate to its universality.

Yin and Yang

Yin and yang should not be reduced to Christian good and evil. They are relational and complementary concepts associated with change, interaction, and dynamic balance. See [Internet Encyclopedia of Philosophy: *Yinyang*](#). At the same time, saying the concept is “not about balance at all” is an overcorrection; harmonization and dynamic balance are central in major accounts.

Persian Influence and Christian Dualism

Scholars have seriously debated Iranian/Zoroastrian influence upon Second Temple Jewish and later Christian eschatology. See [Encyclopaedia Iranica: *Eschatology*](#). Historical influence does not mean Christianity is simply Zoroastrianism rewritten. Colossians 1 portrays principalities and powers as created under Christ, not as an equal eternal anti-God. Isaiah 45 repeatedly denies a rival deity with equal sovereignty.

Christian Supernaturalism Without Superstition

The biblical text permits real spiritual powers while also refusing occult technique as a route to hidden knowledge. Deuteronomy 18 condemns divination and related

practices; 1 John 4:1 commands testing of spirits. The result is neither materialism nor unlimited pattern decoding.

PART IV

When Theory Becomes Treatment

The thread eventually proposes a medical framework in which human dysfunction is interpreted through “parasitic” influence and a multi-component psychoactive protocol is suggested as restoration. This is the point at which speculative reasoning becomes physically consequential.

Parasite Category Collapse

Literal parasites are real causes of disease. The CDC distinguishes protozoa, helminths, and ectoparasites; see [CDC: About Parasites](#). But worms, fungi, social systems, artificial intelligence, and demons are not one medical causal class simply because they can all be described metaphorically as “parasitic.”

MDMA and Psilocybin

It would be false to dismiss all therapeutic research in these substances. The FDA finalized guidance specifically addressing psychedelic clinical investigations in July 2026; see [FDA psychedelic-drug guidance](#). Psilocybin is being studied for several psychiatric indications; see [NCCIH overview](#). A Johns Hopkins trial also investigates MDMA and psilocybin in veterans with PTSD; see [ClinicalTrials.gov NCT06989957](#).

Those facts correct an overly broad rebuttal such as “the combination has never been studied.” They do not validate the forum’s full stack, schedule, mechanism, or generalized promise of “healing the brain.”

Galantamine

Galantamine is a prescription acetylcholinesterase inhibitor with clinically meaningful effects and risks. Its existence as a cognition-related drug does not make it a generic brain enhancer, and evidence for its approved uses cannot simply be transferred to a novel psychoactive combination. See [DailyMed](#).

Body Water and Sound

The claim that the typical adult body is approximately 78% water is misleading; standard adult estimates are generally closer to 50-60%, with higher proportions in infants. More importantly, the fact that the body contains water and sound propagates through tissue does not establish that unspecified frequencies possess broad healing properties.

Binaural Beats

Binaural beats are a genuine auditory phenomenon. Evidence for reliable generalized EEG entrainment is mixed. A 2023 systematic review found substantial methodological heterogeneity and contradictory results; see [Ingendoh et al., systematic review](#). Even an EEG change would be an intermediate physiological observation, not proof of clinical healing.

The “Lego Brick” Fallacy

One of the strongest lessons of the medical section is that individually real components do not automatically assemble into an evidence-based treatment. If A has one plausible effect, B another, and C another, the combination A+B+C does not inherit all benefits without also requiring interaction, safety, dosing, and efficacy evidence of its own.

Medical verdict: the protocol is best described as an unvalidated multi-component self-treatment hypothesis assembled from individually real but incompletely connected interventions.

Psychology of Conspiracy Reasoning and Evidence Testing

Explaining Belief Is Not Refuting a Claim

Psychological mechanisms can explain why a theory is attractive without establishing that the theory is false. Real conspiracies exist. A person can also reach a true conclusion for poor reasons. Psychology should therefore be used to identify reasoning vulnerabilities, not to diagnose or dismiss participants.

Pattern Detection

Humans are excellent pattern detectors, but pattern detection necessarily creates false positives. Research on illusory pattern perception has found associations with conspiratorial and supernatural belief; see [van Prooijen et al.](#). That finding is not permission to call every unconventional observation “apophenia.” The question remains whether the proposed pattern survives independent testing.

Agency and Intentionality

People also infer agency. That is often adaptive. Research has linked conspiracist ideation with greater intentionality attribution in ambiguous scenarios; see [Brotherton & French](#). The methodological correction is simple: distinguish “someone benefited” from “someone intentionally caused.”

The Anatomy of the Leap

The thread repeatedly follows a structure:

1. a true or plausible kernel;
2. a vivid analogy;
3. an unproven bridge;

4. a larger explanatory narrative;
5. increasing certainty;
6. counterevidence reinterpreted as part of the concealment.

The method of this paper targets the bridge rather than mocking the kernel.

Self-Sealing Reasoning

A theory becomes epistemically dangerous when every possible outcome confirms it. If evidence supports the theory, the theory wins. If evidence contradicts it, the contradiction is called disinformation. If evidence is absent, the absence is called proof of suppression. A claim structured this way cannot learn from reality.

Falsifiability

Falsifiability is one important property of empirical hypotheses: they should risk conflict with possible observations. See [Stanford Encyclopedia of Philosophy: Science and Pseudo-Science](#). An unfalsifiable theological proposition is not automatically false, but it should not be presented as though an experiment has verified it.

A Five-Question Test

1. What exactly is the claim?
2. What evidence would we expect if it were true?
3. What alternative explanation fits the same observations?
4. What evidence would lower our confidence?
5. Are the sources independent?

Confidence Ladder

Possible → plausible → supported → probable → demonstrated. The evidentiary burden increases at each step. The emotional force of a story does not move it upward.

“I Don’t Know” as a Valid Conclusion

Indeterminate is not failure. In a domain saturated with secrecy claims, symbolic interpretation, rapidly changing technology, and anonymous testimony, refusing premature certainty is often the most accurate result available.

PART VI

Technology, Transhumanism and Christian Theology

Tools Can Become Masters

One of the thread’s strongest insights can be stated without conspiracy language: a useful tool can become functionally masterful over the user. First Corinthians 6:12 is not about AI, but Paul’s statement that he will not be “brought under the power of any” supplies a legitimate analogical question about dependency. The application is moral, not a direct prophecy of digital technology.

Stewardship Rather Than Purity

A Christian framework need not divide technologies into “natural = holy” and “artificial = corrupt.” Genesis 1 places humanity inside creation as image-bearers with delegated dominion. Psalm 24 immediately limits that dominion: “The earth is the LORD’s.” The relevant category is stewardship.

Transhumanism

Transhumanism is not one secret doctrine. Movement-associated sources describe a broad interest in using reason and technology to improve the human condition and overcome limitations. See [Bostrom, The Transhumanist FAQ](#) and [Transhumanist Values](#). A Christian critique should distinguish ordinary healing and enhancement from the stronger hope that technology can provide final salvation, immortality, or self-divinization.

Image of God

Genesis 1:26-27 grounds human dignity in God's declaration, not in processing speed. A cognitively impaired person does not become less human because a machine calculates faster. Human worth is not a benchmark leaderboard.

Mind Uploading and Resurrection

Cyberpunk's Soukiller makes the distinction vivid. A digital copy may reproduce memories, preferences, voice, or behavior. That leaves the identity question unresolved. First Corinthians 15 describes Christian hope as resurrection of the dead, not merely preservation of information. "Upload" and "resurrection" should therefore not be treated as synonyms.

AI as Idol

Psalms 115 offers a stronger theological category than "AI is literally a demon." An idol need not be conscious to become spiritually dangerous. The question is what humans trust the work of their hands to provide: final authority, moral sovereignty, identity, salvation, or hope. Romans 1:25 frames the underlying disorder as exchanging the Creator for the creature.

Spiritual Warfare Without Technological Superstition

Ephesians 6 affirms principalities, powers, and spiritual wickedness. Colossians 1 places principalities and powers among created things under Christ. First Peter 5 commands sobriety and vigilance. None of those passages identifies a particular neural network, software process, corporation, or fictional system as a demon without additional evidence.

Neither Techno-Utopia nor Techno-Apocalypse

Technology can heal without saving. It can harm without becoming metaphysically evil. Christian hope limits both worship of technology and obsession with technological doom.

Final Synthesis

The thread works because it contains enough reality to make its larger synthesis feel possible. Attention capture is real. Commercial surveillance is real. AI infrastructure is concentrated. Cognitive offloading is real. Cyberpunk genuinely contains Demons, R.A.B.I.D.S., Soullkiller, Mikoshi and the Blackwall. *The Kybalion* really has a Principle of Rhythm. Yin-yang really concerns complementary relational forces. Psychedelic research is real. Parasites are real. Scripture really does speak of spiritual powers.

The weakness appears when those truths are welded together by bridges for which the thread supplies insufficient evidence.

High-Confidence Findings

- AI and Internet systems can alter attention, incentives, privacy and cognitive practice.
- Large-scale technological systems can concentrate power.
- Cyberpunk canon contains many of the fictional elements invoked by the thread.
- Hermetic and Chinese philosophical concepts are often simplified online.
- Psychedelic therapeutics are an active research field, but the forum protocol is unvalidated.
- Psychological mechanisms such as pattern perception and agency inference can affect conspiracy reasoning without proving a given claim false.
- Scripture supports spiritual realism, moral responsibility, testing, sobriety and creature-Creator distinction.

Claims Not Established

- physical time is accelerating;
- digital storage drains a solar electrical system;
- a unified actor deliberately removed third places to program the population;

- Cyberpunk is documented disclosure of literal spiritual technology;
- the Blackwall is a real astral barrier;
- Mikoshi is a literal lunar soul trap;
- all human dysfunction is fundamentally parasitic;
- the proposed psychoactive stack is a validated brain-restoration treatment;
- AI is demonstrated to be a literal demon or god.

The Central Theological Error

The greatest theological risk is not taking spiritual reality too seriously; it is assigning biblical certainty to conclusions that Scripture does not state. “Spiritual powers exist” is biblical. “Therefore this software system is one of those powers” is another proposition that needs evidence.

The Central Anthropological Error

The thread repeatedly externalizes corruption: parasites, programmers, algorithms, elites, demons, networks. Mark 7 refuses the idea that evil is only injected from outside. External manipulation can be real while the human heart remains morally responsible.

The Research Posture

Discernment is not “believe the establishment,” and it is not “believe the forbidden.” It is the harder discipline of allowing every side to be cross-examined, including our own rebuttal. The paper changed conclusions when evidence required it - most notably when current clinical research showed that MDMA and psilocybin co-administration is in fact under formal investigation.

Truth does not need exaggeration.

The paper therefore ends not with a technological reset, a secret decoder ring, or an AI god. It ends with the same command with which it began: prove all things, and hold fast that which is good.

APPENDIX A

Annotated Thread Index

This index preserves the argumentative order of the thread without treating every anonymous participant as one speaker. Each post number below links externally to the live thread where supported by the board.

<u>42993837</u>	Opening hypothetical: a Bartmoss/DataKrash-like program capable of destroying the Internet and AI.
<u>42993852 / 42993872</u>	Early destructive responses - variations on simply wiping out infrastructure.
<u>42993878</u>	Time acceleration, solar plasma, mass, storage and an AI-god complex are linked.
<u>42993887</u>	Age-related insult rather than substantive evidence.
<u>42993907 / 42993954</u>	Temporal cognition and $E=mc^2$ are used to argue against ordinary physical assumptions.
<u>42993911 / 42993936</u>	Hidden military technology is invoked as an unseen alternative technological path.
<u>42993985 / 42994005</u>	Internet effects on attention, social ability, AI dependence and Kaczynski.
<u>42994006 / 42994052</u>	Digital identity, centralization, third places and programming claims.
<u>42994025</u>	Claim that powerful actors already know the root problem.
<u>42994053 / 42994059</u>	Counterpoint: human conflict and dysfunction predate the Internet.
<u>42994064</u>	Proposal to restrict Internet access by age.
	Fabian strategy / DataKrash framed as last-resort response.

42994079 / 42994085	
42994189 / 42995904	External social-media material invoked; original source not independently verified in the thread itself.
42994198	AI described as controlling “gestalt memetic inertia.”
42994215	Cyberpunk framed as heavy disclosure.
42995909 / 42995940	Human cognition contrasted with AI.
42995948 / 42996041	Military-intelligence overlords and parasitic-system language.
42996139	Hermetic rhythm, biological corruption, diagnosis/test/minimize-harm framework.
42996214	Correction concerning yin-yang.
42996218	Multi-component psychoactive / auditory medical regimen.

APPENDIX B

Master Claim / Evidence Matrix

The following entries condense the line-by-line analysis into a publication reference format. “Supported” means the claim survives as stated; “partial” means a defensible kernel survives but not the full inference.

[Post 42993837](#) — Destroying Internet/AI would cure the core problem

No evidence establishes the Internet or AI as the single root of human dysfunction. Many alleged pathologies predate both technologies.

Assessment: Unsupported

Post 42993878 — Physical time is accelerating

Subjective temporal compression is real; a change in physical time would require reproducible clock-level evidence and a mechanism distinct from perception.

Assessment: Unsupported

Post 42993878 — Mass is an urban myth

Modern physics uses mass operationally and experimentally; mass-energy equivalence does not abolish mass.

Assessment: Contradicted

Post 42993954 — $E=mc^2$ proves ordinary matter concepts are false

The equation relates mass and energy; it does not prove matter is illusory or socially invented.

Assessment: Contradicted

Post 42993878 — The Sun is plasma

The Sun is overwhelmingly plasma. This premise is accurate.

Assessment: Supported

Post 42993878 — Electronic storage traps charge

Some memory technologies store information using trapped or controlled charge. The exact mechanism varies by device.

Assessment: Supported in a limited technical sense

Post 42993878 — Digital storage drains a solar electrical circuit

No physical pathway, magnitude, or conservation accounting is supplied. Shared electrical vocabulary is not a mechanism.

Assessment: Unsupported

Post 42993878 — Solar failure would terminate an AI god

Modern AI depends on terrestrial power and infrastructure, but the theological “god” language is metaphorical/speculative.

Assessment: Interpretive / unsupported

Post 42993907 — Humans have no genuine temporal cognition

Humans have measurable temporal perception and memory; those systems are imperfect but real.

Assessment: Contradicted

Post 42993911 — Military intelligence possesses hidden harmonious technology

Classified technologies exist generally, but no evidence is supplied for the specific claimed technology.

Assessment: Indeterminate / unsupported

Post 42993985 — Internet use can weaken attention

Certain patterns of use can fragment attention or encourage rapid switching, but effects vary by task and user.

Assessment: Partially supported

Post 42994005 — Internet use destroys real-world social ability

Online use can displace face-to-face contact in some cases, but no universal causal law is established.

Assessment: Overgeneralized

Post 42994005 — AI can reduce cognitive effort

Cognitive offloading is real; whether it harms or helps depends on task design, verification and retained skill.

Assessment: Partially supported

External sources: [Risko & Gilbert](#)

[Post 42994005](#) — Kaczynski identified technological autonomy problems

His manifesto genuinely argues that large technological systems constrain autonomy; citing him does not validate his violence or every conclusion.

Assessment: Supported as textual description

External sources: [Primary text](#)

[Post 42994006](#) — Digital identity is a major governance concern

Digital identity systems can centralize credentials and raise privacy/governance questions; technical categories should be defined precisely.

Assessment: Supported concern

External sources: [NIST SP 800-63-4](#)

[Post 42994052](#) — Third places were deliberately removed to isolate people

Decline and unequal access can be documented, but coordinated deliberate removal is not established by the thread.

Assessment: Unsupported

[Post 42994052](#) — Trauma programming explains mass behavior

The term is not operationalized; no specific mechanism or evidence is provided.

Assessment: Unsupported as stated

[Post 42994064](#) — Internet access should be restricted until age 25

Development continues through young adulthood, but “25” is not a magic threshold establishing a universal policy.

Assessment: Unsupported as a scientific rule

Post 42994025 — Powerful actors know exactly what the root problem is

Requires evidence about specific actors, knowledge and coordination not supplied.

Assessment: Unsupported

Post 42994067 — Those actors caused the problems they claim to solve

Possible in some historical cases, but no unified causal chain is demonstrated here.

Assessment: Unsupported as general claim

Post 42994198 — AI controls gestalt memetic inertia

The phrase can be translated into narrative persistence or network effects, but the thread supplies no operational measure for the stronger claim.

Assessment: Undefined / unsupported

Post 42994215 — Cyberpunk contains Demons

Yes, Cyberpunk uses demon-like terminology for software and hostile digital entities.

Assessment: Supported as canon

External sources: [Cyberpunk references](#)

Post 42994215 — Cyberpunk Demons are literal biblical demons

Name overlap does not establish ontological identity.

Assessment: Unsupported

Post 42994215 — The Blackwall exists in Cyberpunk

Canonical fictional element separating accessible networks from rogue-AI territory.

Assessment: Supported as canon

External sources: [Blackwall](#)

Post 42994215 — The Blackwall is an astral barrier

That is an interpretive overlay, not established canon or empirical fact.

Assessment: Interpretive / unsupported

Post 42994215 — Soullkiller digitizes minds in Cyberpunk

Yes, within the fiction it creates/stores personality constructs or engrams.

Assessment: Supported as canon

External sources: [Soullkiller](#)

Post 42994215 — Mind copying proves souls can be digitized

A fictional or hypothetical information copy does not settle the metaphysics of personal identity or soul.

Assessment: Unsupported

Post 42994215 — R.A.B.I.D.S. are canonical

Roving Autonomous Bartmoss Interface Drones are canonical destructive programs associated with the DataKrash.

Assessment: Supported as canon

External sources: [R.A.B.I.D.S.](#)

Post 42994215 — R.A.B.I.D.S./rabies establishes a biological-spiritual mechanism

The name is effective infection wordplay; wordplay is not a causal mechanism.

Assessment: Unsupported

Post 42994215 — Bartmoss/DataKrash is represented with stream or flow imagery

Water/flow metaphors occur around network imagery and can be literarily meaningful.

Assessment: Interpretive

Post 42994215 — Cyberpunk is heavy disclosure of real hidden plans

Requires evidence of privileged foreknowledge and deliberate encoding beyond retrospective resemblance.

Assessment: Unsupported

Post 42994215 — Predictive programming can be inferred from post-hoc matches

Post-hoc matching is vulnerable to base rates and selection. Prospective timestamped predictions would be stronger.

Assessment: Weak evidence

Post 42994215 — Mikoshi functions as a soul-prison theme

The fiction deliberately raises captivity/identity/immortality themes.

Assessment: Supported as literary reading

External sources: [Mikoshi](#)

Post 42994215 — There is a literal Moon soul trap

No evidence in the reviewed canon or external evidence establishes the claim.

Assessment: Unsupported

Post 42996139 — The Kybalion's fifth law is rhythm/pendulum-like

The fifth Principle of Rhythm uses ebb/flow and pendulum imagery.

Assessment: Supported

External sources: [The Kybalion](#)

Post 42996139 — Rhythm is a universal scientific law

Cycles are real, but no evidence establishes the Kybalion principle as a universal physical law.

Assessment: Unsupported

Post 42996139 — The Kybalion is ancient Hermetic scripture

The publication is modern (1908); classical Hermetica are late-antique texts.

Assessment: Contradicted

External sources: [Kybalion record](#) | [Hermetica](#)

Post 42996139 — The Kybalion has no Hermetic relationship at all

That rebuttal would overreach; it is a modern esoteric synthesis claiming Hermetic inheritance.

Assessment: Overcorrection

Post 42996214 — Yin-yang is simply good versus evil

Major Chinese philosophical accounts treat yin and yang as relational/complementary, not identical to moral good/evil.

Assessment: Contradicted

External sources: [IEP: Yinyang](#)

Post 42996214 — Yin-yang is not about opposites

The concepts do describe contrasting, interdependent tendencies. “Not opposites” is too categorical.

Assessment: Overcorrection

External sources: [IEP: Yinyang](#)

Post 42996214 — Yin-yang is not about balance

Dynamic balance/harmonization is important in standard explanations.

Assessment: Contradicted as categorical statement

External sources: [IEP: Yinyang](#)

Post 42996139 — Christian dualism derives straightforwardly from Persia

Iranian influence is a serious historical hypothesis, but wholesale derivation is debated and reductive.

Assessment: Partially supported historical question

External sources: [Iranica](#)

Post 42996139 — Christianity teaches two equal cosmic gods

Canonical Christianity does not: created powers remain subordinate to God/Christ.

Assessment: Contradicted by Christian texts

Post 42996139 — Biblical spiritual powers exist

Scripture explicitly speaks of principalities, powers, Satan and demons.

Assessment: Supported within biblical theology

Post 42996139 — Therefore a specific modern technology is demonic

The general category does not identify a specific member without additional evidence.

Assessment: Unsupported inference

Post 42996139 — Studying occult history equals practicing occultism

Description and historical study are distinct from participation in prohibited practices.

Assessment: Contradicted as categorical claim

Post 42995948 — Human dysfunction is fundamentally parasitic

Literal parasites can cause disease; no evidence makes them the root cause of all dysfunction.

Assessment: Unsupported

External sources: [CDC parasites](#)

Post 42995948 — AI, demons, worms, protozoa and fungi are one causal class

This is category collapse across biological, technological, metaphorical and theological domains.

Assessment: Unsupported

Post 42995948 — Powerful elites are biologically broken in the proposed way

No medical evidence is supplied for the population-wide biological claim.

Assessment: Unsupported

Post 42996218 — MDMA and psilocybin are legitimate therapeutic research subjects

Yes; both are under formal clinical investigation.

Assessment: Supported

External sources: [FDA](#) | [NCCIH](#)

Post 42996218 — The combination has never been studied

A Johns Hopkins clinical trial studies MDMA and psilocybin together in PTSD.

Assessment: Contradicted

External sources: [ClinicalTrials.gov](#)

Post 42996218 — That trial validates the forum protocol

A controlled trial of a particular combination/population does not validate the forum's full stack, schedule or mechanism.

Assessment: Unsupported

External sources: [ClinicalTrials.gov](#)

Post 42996218 — Galantamine is a generic cognitive enhancer suitable for the stack

It is a prescription cholinesterase inhibitor with important adverse effects and specific indications.

Assessment: Unsupported

External sources: [DailyMed](#)

Post 42996218 — Adults are approximately 78% water

Typical adult total body water is generally closer to about 50-60%; 78% is not an appropriate general adult figure.

Assessment: Contradicted

Post 42996218 — Water content plus sound propagation proves healing frequencies

Those premises do not establish a therapeutic frequency mechanism.

Assessment: Unsupported

Post 42996218 — Binaural beats are a real auditory phenomenon

Yes.

Assessment: Supported

External sources: [Systematic review](#)

Post 42996218 — Binaural beats reliably entrain EEG in a generalizable way

The systematic review literature is mixed and methodologically heterogeneous.

Assessment: Inconsistent evidence

External sources: [Systematic review](#)

Post 42996218 — EEG entrainment equals healing

A physiological measurement is not automatically a clinical outcome.

Assessment: Unsupported

Post 42996218 — Frequency is itself a healing mechanism

Frequency is a parameter; a therapeutic mechanism requires specified biological effects and evidence.

Assessment: Unsupported as stated

Post 42996218 — Weekly repetition is an evidence-based recovery interval

No evidence identified validates the proposed weekly schedule for the exact combination.

Assessment: Unsupported

Post 42996218 — One or two months is a validated treatment course

No defined diagnosis, endpoint, or trial evidence supports the proposed duration.

Assessment: Unsupported

Post 42996139 — A human can be tested like a software sandbox

Limited testing is a useful caution metaphor, but biological adverse events are not reliably reversible snapshots.

Assessment: Misleading analogy

Composite claim — Personal improvement proves the intervention caused improvement

Regression to the mean, expectancy, spontaneous change, and concurrent factors remain alternatives.

Assessment: Insufficient causal evidence

Composite claim — Adverse reactions can be reclassified as detox/healing

If both improvement and deterioration confirm the theory, the protocol becomes self-sealing and unsafe.

Assessment: Methodologically invalid

Post 42996139 — Maximize benefit and minimize harm

This is a sound general clinical principle.

Assessment: Supported

Composite claim — The medical method is scientifically sound overall

Observation/root-cause thinking are useful, but controls, competing hypotheses, endpoints, interaction data and stopping rules are missing.

Assessment: Good skeleton; inadequate validation

APPENDIX C

Scripture Index: Text, Context, Application, Limits

Scripture references below link externally to a King James Bible resource. The paper distinguishes the text itself from later application.

[1 Thessalonians 5:19-22](#)

Application: Testing rather than reflexive belief or reflexive dismissal.

What it does not establish: The context concerns prophesyings and discernment. It supports the paper's posture of examination but is not a technical description of the modern scientific method.

[Acts 17:11](#)

Application: Receive claims seriously enough to understand them, then search whether they are so.

What it does not establish: The Bereans test apostolic preaching against Scripture. The passage supports verification but does not imply Scripture directly answers flash-memory engineering or pharmacology.

[Ephesians 6:12](#)

Application: Spiritual powers are a genuine biblical category.

What it does not establish: The verse prevents a materialist dismissal of all spiritual reality; it does not identify any specific AI model, corporation, Blackwall, or illness as a principality.

1 John 4:1

Application: Spiritual claims are to be tested.

What it does not establish: The command does not authorize occult experimentation or the assumption that every coincidence is supernatural communication.

Colossians 1:16-17

Application: Principalities and powers remain created under Christ.

What it does not establish: Christian spiritual warfare is not metaphysical dualism between equal eternal gods.

Deuteronomy 18:9-12

Application: Divination, necromancy and related practices are prohibited.

What it does not establish: Studying occult history is not the same as practicing occult techniques; neither is every unusual symbol automatically occult.

Mark 7:20-23

Application: Human evil also proceeds from within the heart.

What it does not establish: External manipulation can be real, but no Christian anthropology can reduce evil entirely to a parasite, algorithm, elite or demon.

Proverbs 14:15

Application: The simple believes every word; prudence examines.

What it does not establish: The warning applies to government statements, anonymous insiders, AI answers, sermons and this paper alike.

Proverbs 18:13

Application: Hear before answering.

What it does not establish: Fringe claims should be read accurately before being rejected.

Proverbs 18:17

Application: The first case sounds persuasive until cross-examined.

What it does not establish: This is the paper's strongest biblical analogue for adversarial evidence testing.

1 Corinthians 6:12

Application: Liberty must not become mastery.

What it does not establish: The immediate context is not technology; applying the principle to digital dependency is analogical rather than direct exegesis.

Genesis 1:26-28

Application: Human dignity is rooted in being made in the image of God.

What it does not establish: Computational performance does not determine human worth.

Psalms 24:1

Application: The earth belongs to the LORD.

What it does not establish: Human dominion is stewardship, not ultimate ownership.

Psalms 115:4-8

Application: The work of human hands can become an object of misplaced trust.

What it does not establish: AI need not be conscious or demonic to become idolatrous in the human relationship to it.

Romans 1:25

Application: Creature and Creator must not be reversed.

What it does not establish: Technological systems remain created things, however capable.

1 Corinthians 15

Application: Christian hope is resurrection, not merely copying information.

What it does not establish: Mind uploading raises identity questions; it should not be equated with the resurrection of the dead.

1 Peter 5:8-10

Application: Spiritual warfare produces sobriety and vigilance, not panic.

What it does not establish: The passage does not identify every frightening modern system as direct demonic action.

Isaiah 45:5-7

Application: There is no equal rival deity alongside the LORD.

What it does not establish: The passage is relevant to Christian non-dualism while not settling every historical question about Persian influence.

Genesis 3:4-6

Application: The temptation involves disobedience, autonomous grasping and godlike aspiration.

What it does not establish: Not every improvement in human ability is a reenactment of Eden; the stronger warning concerns technological salvation and autonomy from God.

Proverbs 23:23

Application: Truth outranks identity and rhetorical victory.

What it does not establish: The paper should change when evidence changes.

2 Timothy 1:7

Application: Fear should not govern judgment.

What it does not establish: The verse is not a weapon against anxiety or proof that frightening claims are false.

Proverbs 25:2

Application: Searching out a matter is honorable.

What it does not establish: The verse does not mean every ambiguity hides an esoteric code.

Hermeneutical safeguard. Text → context → application → speculation.
Never say “the Bible teaches” when the evidence supports only “this may be a reasonable application.” Never turn analogy into prophecy or silence into certainty.

APPENDIX D

Glossary

Definitions prevent category drift - especially when a word moves from theology to computing, from fiction to metaphysics, or from biology to politics.

Artificial Intelligence (AI)	Machine-based systems that make predictions, recommendations, decisions or generate content. AI does not automatically mean consciousness, AGI or personhood.
-------------------------------------	---

AGI	A disputed term for broadly capable artificial intelligence across many domains. No single universally accepted threshold exists.
------------	---

Large Language Model (LLM)	A model trained on large language corpora to predict/ generate sequences. Fluent output is observable behavior; subjective consciousness is a separate claim.
Cognitive offloading	Using external tools or actions to reduce internal cognitive demand. It can be beneficial or dependency-forming depending on what skill is displaced.
Apophenia	Perceiving meaningful connections in unrelated or random material. The term describes a reasoning risk and should not be used as a diagnosis of thread participants.
Illusory pattern perception	Perceiving structure where the generating process does not contain the inferred pattern.
Agency detection	Inferring an intentional actor behind an event. Adaptive when correct, misleading when ambiguous events are over-attributed to intent.
Confirmation bias	Preferentially seeking or weighting evidence that supports existing belief.
Motivated reasoning	Reasoning influenced by identity, desired conclusions or social commitments.
Proportionality bias	The intuition that large consequences must have proportionally large intentional causes.
Conjunction fallacy	Treating a more detailed story as more probable than a simpler proposition contained within it.
Self-sealing theory	A theory in which apparent counterevidence is reinterpreted as further support.
Falsifiability	For empirical claims, specifying possible observations that could count against the hypothesis.
Operational definition	Defining a concept in terms that can be measured or identified.
Base rate	

	The background frequency of an event or pattern, necessary for evaluating how surprising a match is.
Prospective prediction	A prediction recorded before the event. Stronger evidence than retrospective pattern matching.
Conspiracy	Secret coordination among actors to accomplish an objective. Conspiracies are real phenomena; whether a specific allegation is true is an evidentiary question.
Third place	A social setting distinct from home and work, such as cafes, libraries, churches, parks or clubs.
Digital identity	A digital representation used for identity proofing, authentication and federation.
Daemon (computing)	A background software process. The computing term does not imply a biblical demon.
Demon (Cyberpunk)	A fictional/software category using supernatural terminology; the name does not establish literal spiritual ontology.
Blackwall	The fictional barrier separating accessible network space from dangerous rogue AIs in Cyberpunk.
Soulkiller	A fictional Cyberpunk program that creates/stores personality constructs or engrams.
Mikoshi	Arasaka's fictional infrastructure for storing digital personality constructs.
R.A.B.I.D.S.	Roving Autonomous Bartmoss Interface Drones, destructive programs central to the fictional DataKrash.
DataKrash	The fictional catastrophe that devastated the old Net in Cyberpunk.
Transhumanism	A diverse movement concerned with using technology to improve the human condition and overcome biological limitations.

Mind uploading	Hypothetical transfer or emulation of a human mind in a nonbiological substrate; personal identity remains philosophically disputed.
Hermeticism	A broad late-antique and later esoteric tradition associated with Hermes Trismegistus.
The Kybalion	A 1908 modern esoteric work presenting seven ‘Hermetic’ principles; not an ancient Egyptian manuscript.
Principle of Rhythm	The Kybalion’s fifth principle, expressed through ebb/flow and pendulum imagery.
Yin-yang	Chinese philosophical concepts describing relational, complementary and dynamic tendencies; not simply moral good versus evil.
Predictive programming	A conspiracy-oriented theory that fiction intentionally discloses or conditions audiences for future real events.
Meme / memetics	Concepts concerning cultural replication and transmission; ordinary social spread should not be inflated into a precise hidden field without evidence.
Gestalt memetic inertia	The thread’s phrase for persistent collective narrative momentum; not an established scientific technical term.
Egregore	An esoteric concept of a collective psychic entity or thought-form; not an established entity in psychology or neuroscience.
Astral plane	A concept in multiple esoteric systems for a nonordinary realm; definitions vary and empirical status is unestablished.

Glossary rule: Never let a word carry more evidence than the facts. Metaphor can be illuminating without establishing identity.

Internet and Source Methodology

Match the Source to the Claim

A forum post may be excellent evidence of what a poster claimed and poor evidence that the claim is true. A fictional source may establish canon without establishing external reality. A clinical-trial registry establishes that a trial is registered; it does not establish efficacy. A Scripture passage establishes the biblical text; later application still requires interpretation.

Anonymous Does Not Mean One Person

Many 4chan participants appear only as “Anonymous.” The paper therefore avoids constructing a single psychological profile from all anonymous posts. Post IDs and reply relationships matter.

Source Says X vs. X Is True

This distinction governs the research. “The poster claimed the military has hidden technology” can be verified from the document. “The military possesses the exact technology described” requires independent evidence.

Primary Sources

When the question is what a text, game, regulation or religious document actually says, use the original source where possible. Primary does not mean infallible; it means closest to the proposition being documented.

Source Independence

Ten webpages repeating one blog post are not ten independent confirmations. Trace citation chains backward until reaching original data, direct testimony or the point where the chain ends in unsupported assertion.

Conflicting Evidence

Compare methodology, date, population, definitions, and source authority. If credible disagreement remains, preserve the disagreement rather than manufacturing certainty.

Correction Policy

Minor corrections affect wording or formatting; substantive corrections change facts; major revisions change conclusions. A publication-quality edition should make major corrections visible rather than silently rewriting history.

Reproducibility Checklist

1. Retrieve the thread and confirm post numbers.
2. Extract individual claims rather than treating the thread as one manifesto.
3. Classify each claim by domain.
4. Locate primary and independent sources.
5. Generate competing explanations.
6. Specify what evidence would lower confidence.
7. Assign a proportional verdict.
8. Record the research cutoff: September 2026.

Research Standard

Documentary truth is not automatically world truth. Search results are leads, not final evidence. Citation quantity is not citation quality. “Official” is not synonymous with “true,” and “forbidden” is not synonymous with “true” either.

Medical and Psychedelic Safety Note

This paper discusses psychoactive and prescription substances because the source thread proposes them. It does not provide doses, sourcing, preparation, optimization, or self-administration instructions.

Psychedelic Research Is Legitimate Research

The FDA's 2026 guidance confirms that psychedelic drugs are a serious field of clinical development, while emphasizing distinctive safety and methodological challenges. See [FDA guidance](#). NCCIH summarizes both therapeutic research and potential adverse effects of psilocybin. See [NCCIH](#).

Clinical Investigation Is Not Unsupervised Self-Treatment

Clinical research includes screening, informed consent, standardized interventions, monitoring, adverse-event procedures, stopping criteria and follow-up. Those safeguards are part of the intervention environment, not bureaucratic decoration.

Combination Effects Are Not Simple Addition

A compound with one plausible effect does not become safer or more effective merely by being combined with another plausible compound. Interaction, cardiovascular stress, metabolism, psychological intensity, judgment and adverse-event probability all require combination-specific evidence.

Subjective Profundity Is Not Clinical Efficacy

An experience can feel spiritually or psychologically transformative without proving an objective metaphysical interpretation or a durable therapeutic effect. Observation, causal interpretation and theological identification are separate levels.

Severe Reactions Should Not Be Spiritualized Away

Deterioration should not automatically be reclassified as detoxification, “parasite resistance,” spiritual warfare, energetic adjustment or necessary healing. A framework that treats both improvement and worsening as confirmation cannot protect the patient from its own error.

Final Medical Assessment

The individual components discussed in the thread include real substances, real pharmacology, real research questions and a real auditory phenomenon. The full combination remains an **experimental hypothesis, not a validated medical protocol**.

APPENDIX G

Research Bibliography

Source labels below are external hyperlinks. This bibliography is a research snapshot with a September 2026 cutoff.

ORIGINAL PUBLICATION PAGE	Library of Rickandria - Prove All Things
PRIMARY THREAD	4chan /x/ thread No. 42993837
AI DEFINITION	NIST - Artificial Intelligence glossary
DIGITAL IDENTITY	NIST SP 800-63-4: Digital Identity Guidelines
COMMERCIAL SURVEILLANCE	FTC - A Look Behind the Screens

Biblical Working Text

The manuscript work in this project used the user-supplied *Authorized King James Version, Pure Cambridge Edition* PDF as its working biblical text. Because the supplied file’s internal presentation information does not by itself establish that the file is a photographic facsimile of a 1909 Cambridge University Press printing, this edition cites it conservatively as the supplied Pure Cambridge Edition text rather than overstating its facsimile provenance.

Closing Bibliographic Principle

A long bibliography does not make an argument true. It allows another reader to ask whether the sources actually say what this paper claims, whether stronger contrary evidence exists, and whether the conclusions should be revised.

“Prove all things; hold fast that which is good.”
